- Meeting both technical and consumer needs.

TECHNICAL SKILLS

Front-End
CSS
HTML
JS

Databases
MySQL
SQL Server
MongoDB
Firebase

Backend:
PHP
NodeJS
PERL

Frameworks and Libraries
Wordpress
Twitter Bootstrap
jQuery
React
NodeJS
Codeigniter
Laravel
Angular
Android
Vue
KOJS
GO
Swift

Concepts
MVC
SOLID
TDD
BDD

Version Control Systems
GIT

Intellisys D Corp, Dominican Republic — *Senior Software Developer*

March 2019 - PRESENT

Wirecutter:

- Developing Wordpress plugin to read information from graphql service.
- Developing feature created on react.
- Developing graphql service based on Nodejs that used MongoDB as a database.
- Developing features for a microservice based on react that interact with graphql, rest api and mysql database and WordPress.
- Developing new features with unittest for custom CSM based on Laravel that provide information for wordpress as RestApi.
- Using the SCRUM Agile framework for the project management in the development process, having daily meetings with the project managers, product owners, product engineers, and other developers to measure the progress.

Babyname Wordpress Project:

- Team leader on a team of 3 engineer:
  - Updating site to support new and custom theme.
  - Updating plugin and widget to support new theme features.
  - Adding support to elementor plugin on the new theme and widget.

SoulCycle:

- Helping in the process to migrate the payment gateway to Adyen payment system to allow the e-commerce site to support the UK payment in London allowed payments from 3 different countries USA, UK, Canada, and more than 30 studios.
- Worked supporting, developing and adding new features for the manager system that control around millions of items and booking process for all of the studios.
- Worked creating the structure of REST API for SoulCup 2019 extending the system to manage campaigns, teams, users stats by the WEB and Mobile native applications.
- Updating the structure of the main menu header base in react with server side render.
- Extended Podium SoulCycle Site (Service of SoulCycle based in React with Nodejs) to display a mobile banner of branch IO to install the

SoulCycle app and also the integration test for it.

- Updated the SoulCycleUIKit React hero component to support different layouts.
- Using the SCRUM Agile framework for the project management in the development process, having daily meetings with the project managers, product owners, product engineers and other developers to measure the progress.

Indagare Wordpress Project :

- Team leader, consultant and product owner.
- Working on the site performance to increase the speed of the site in less than 3 months we made the page load from 20 seconds down to 2 seconds load.
- Added a test planning to the site to introduce as few bugs as possible whenever new deployments applied to the site.
- Fixed bugs on their payments system that does allow them to have new customers in months.

ITVC Continental, Dominican Republic — *Senior Software Developer*

JAN 2014 - December 2018

Suit Connected:

- Building features for Vicidial in PERL to make the communication-consuming rest API, asterisk system and mandrill api for emails campaigns.

- Monitoring system based on PERL to track Vicidial's bugs.

- Building features and support for an open source system called vicidial but one of the most important projects was one that integrated Vicidial, Twilio SMS and Mandrill emails all working together as a microservice.

Other projects:

- Creating reports to handle the realtime information about calls, sales, DNC and all the user and customer stats.
- Building CRM to integrate some custom information with vicidial.
- Integrating WEB RTC phone with Vicidial.

EDUCATION

Pontificia Universidad Católica Madre y Maestra (PUCMM) (TEP), Dominican Republic — *Technical building and administration information system.*

2008 - 2010
